

Gemini in Google Slides Activity: Generate an Image

In this activity, you apply what you learned about Gemini in Google Slides while acting as a sales representative for Cymbal Retail.

Cymbal Retail is about to begin selling its newest software product, Cymbal CRM. Cymbal CRM is a cloud-based customer relationship management (CRM) system that helps retailers improve their sales, marketing, and customer service.

With Cymbal CRM, you can:

- Track customer interactions and history
- Manage your sales pipeline
- Create and track marketing campaigns
- Provide better customer service

Task 1 - Generate an image

Use generative AI to generate an image for your sales demo presentation for Cymbal CRM.

Complete the following steps:

1. Open Google Slides.
2. Select **Start a new presentation > Blank** to open a new file.
3. In the toolbar, select the **Create image with Gemini** button.
4. Enter a prompt to generate an image.

Directions: Clients you're targeting currently use old-fashioned tools to track their customer interactions and history. Their desks are filled with sticky notes and they use old landline telephones.

You want to have a visual that shows the "before" state for customers before they use your product. You want a visual that shows an exaggerated version of one desk at their current messy contact center office described above.

Tip: You may need to include portions of the product description (defined earlier in this exercise) in the prompt.

5. Click **Create**.

Note: *The images might take several seconds to generate.*

Check your work: Does the visual contain...

- ☐ A single messy looking desk area?
(not many desks)
- ☐ Lots of sticky notes scattered
around?
- ☐ An old landline telephone?

Task 2 – Add a style

In this task, you edit the prompt from Task 1 to provide a desired style to get better results.

Complete the following steps:

1. Choose **Add a style** to pick a style for your image.

Directions: Your slide deck overall has more of a cartoon-like feel. You want your “before” visual to fit in with the rest of the presentation. Change your style to generate vector art images.

2. Click **Create**.

Note: *The images might take several seconds to generate.*

Check your work: Does the visual...

- ☐ Appear cartoon-like or like vector art?
- ☐ Still contain a messy desk, sticky notes, and a landline telephone?
